

**BOON EDAM**

Bullet-Resistant Package

Upgrade the security level of a Tourlock security revolving door and/or Circlelock security portal by incorporating bullet-resistant glass, coupled with extra door reinforcements. These additional security precautions can help save the lives of people from an attack with firearms from the exterior of the building.

 *your entry experts*

Implications

The Bullet-Resistant Package equips a security door with the ability to stop three .44 magnum bullets, or a bullet twice as heavy and significantly faster than the bullet of the most common handgun, a 9mm semi-automatic. If the security door is on a building facade, it is recommended that the adjacent storefront be upgraded to include bullet-resistant materials as well.

Specifications

- 1** Door wing glass: clear, poly-glass laminate, bullet-resistant, Level 3 glass (29 mm thick)
- 2** Curved sidewall glass: clear, poly-glass laminate, bullet-resistant, Level 3 glass (29mm thick)
- 3** Reinforced end and side posts: 1/8" steel-plate lining
- 4** Reinforced canopy facade on non-secure side: aluminum lined with 7/16" bullet-resistant fiberglass
- 5** Reinforced canopy roof: two 7/16" bullet-resistant fiberglass plates in semi-circle configuration
