

StereoVision 2[®] Anti-Piggybacking Technology

BOON EDAM

Standard on our Circlelock security portals and optional on our Tourlock 180+90 security revolving doors, StereoVision 2 is a proven technology that accurately detects and prevents piggybacking, or two users attempting to enter the door on one authorized credential. StereoVision 2 combines optical and near-infrared sensor technologies for an exceptionally reliable solution that is not impaired by lighting or reflections.

 *your entry experts*

Characteristics

- Allows only one authorized individual at a time
- The only highly effective system to replace traditional weight systems or contact mats
- Highly accurate physical access control that does not slow down the door operation
- Compatible with any access control system
- Can be combined with a biometric device inside a Circlelock security portal for two-factor or multi-factor authorization

Reliable Predictability

Due to its constant data collection and configuration settings, StereoVision 2 is capable of providing security managers with predictable metrics tied to asset protection, compliance and risk. Ask for more details.
